Re; CAP System

Dear Mr. Sofer

The air quality in our lab has dramatically and quickly improved since your company installed four CAP devices within our premises in October 2004. The afore mentioned CAP devices have virtually eliminated all the smell of embalming fluid and prevented the lingering of bone dust in the air we breathe while on duty.

We also have two smaller units within the embalming room. They have made a positive improvement in the air quality right where the use of embalming fluid is constant.

I am very pleased to notice that also the odors in the hallway outside the gross labs have ceased to be felt since we have been using your CAP devices.

I know that all my coworkers and myself would have no reservations in recommending you CAP systems to anyone.

Yours Truly,

Paolo Varricchio, MD
Research Teaching Specialist II and
Adjunct Assistant Professor
Department of Cell Biology and Molecular Medicine
